

RHIC BPM Meeting

September 11, 2008

Minutes

Attendees: Phil Cerniglia, Chris Degen, Justin Gullotta, Rob Michnoff, Michiko Minty, Bob Olsen, Todd Satogata,

This entire meeting was devoted to discussing BPM Data Integrity checking mechanisms, including status bit definition and ADO parameters.

The resulting document is provided separately.

Some outstanding issues include:

1. Should data be returned when a sanity failure exists?
2. Should additional status bits be added to identify the specific sanity failure reason? This would be in addition to the existing sanityFailureReason text ado parameter.
